An introduction to geometry in the plane, both Euclidean and hyperbolic, this book is designed for an undergraduate course in geometry. With its patient approach, and plentiful illustrations, it will also be a stimulating read for anyone comfortable with the language of mathematical proof.

Description: Geometry Illuminated

The geometry studied in this book is Euclidean geometry. Euclidean geometry is named for Euclid of Alexandria, who lived from approximately 325 BC until about 265 BC. The ancient Greeks developed geometry to a remarkably advanced level and Euclid did his work during the later stages of that development. He wrote a series of books, called the

Rebecca, You might want to check out Posamentier's "Excursions in Advanced Euclidean Geometry" (an excellent resource for any geometry class!) It has a short section on Stewart's Theorem along with several applications of it to triangles. Stewart's Theorem: Let d be the length of a Cevian of a triangle that divides the opposite side of length c ...
