called a combustion turbine, is a type of continuous and internal combustion engine. The main elements common to all gas turbine engines are: an upstream rotating gas compressor; a combustor; a downstream turbine on the same shaft as the compressor.; A fourth component is often used to increase efficiency (on turboprops and

turbine engine it its various forms, such as turbojet, turbofan, turboprop, and turboshaft powerplants.

Aircraft Gas Turbine Engine Technology by Irwin E. Treager

Mainshaft seals are used in gas turbine engines to restrict gas leakage into the bearing compartments (sumps). The air leaking through the

Get Free Aircraft Gas Turbine Engine

seal prevents oil leakage out. In some engines the gas pressure and temperature are relatively low, so that a single labyrinth seal to restrict gas leakage into the sump is adequate (Fig. 1).
