Nanoscale Engineering at the Surface. Topographic reaction (i.e., reaction to the surface landscape) of cells to micrometer-range features such as grooves, ridges, and wells has been well established for decades ().The fibers of the ECM and basement membrane (10 to 300 nm in diameter), their interconnecting nanopores, and hydroxyapatite crystals (4 nm) found in natural bone typically have ...

Exploring and Engineering the Cell Surface Interface | Science

This is a wonderful extended discussion of the intersection of traditional statistics with "big data". There's a lot of math and the mathematical development, as well as the choice of topics, is informed by the issues raised in data exploration, and therefore well motivated for readers like myself who are more engineering focused.
