Power electronics is the application of solid-state electronics to the control and conversion of electric power. The first high power electronic devices were mercury-arc valves. In modern systems, the conversion is performed with semiconductor switching devices such as diodes, thyristors, and power transistors such as the power MOSFET

Power electronics is a key technology for energy saving and high functionalizing in energy usage. The power electronics application has a tendency toward high voltage and lessening current to reduce conduction loss. The key component for high voltage power electronics is a power semiconductor device for the switching operation.
