We thought that the solutions manual would help more than it has. One thing it does have is a section on using Maple for Diff Eq., which is clunky, but it works if the syntax is perfect. It should be noted that the text is not the easiest thing to read. That said, the Solutions Manual is a good thing to have, as every little bit helps.

1.1 SOME BASICS 3 Example 1.1.2 Show that the differential equation $x'' = x^2/3$ has infinitely many solutions satisfying $x(0) = 0$ on every interval $[0, b]$. Solution Define $xc(t) = 0$, if $0 \leq t < c$; $(t-c)^{3/2}$, if $c \leq t \leq b$. It is easy to check for any c , the function xc satisfies the differential equation and $xc(0) = 0$. Answer 1.3 For whatever value Individual 1 chooses (denotedby S_1), Individual 2's best response is $S_2 = B_2(S_1) = 1 - S_2$. Conversely, $S_1 = B_1(S_2) = 1 - S_1$. We know this because if $S_2 < 1 - S_1$, then there is money left on the table and Individual 2 couldincrease his or her payoff by asking for more.

Solution: Let us assume that the dog runs on a path given by the graph of the function f as in the figure above. Suppose that after a certain time t the dog is at a position $(x, f(x))$ and the man is on the y -axis at $(0, vt)$ where v is his speed in meters per second (assumed constant). The fact that the dog is running toward the

It has many features that the other texts don't have, e.g., stability theory, the Z-transform method (including a study of Volterra systems), and asymptotic behavior of solutions of difference equations (including Levinson's lemma) are studied extensively.
