Teaching The Brain To Read by Duncan Milne

Reading comes easily to some students, but many struggle with some part of this complex process that requires many areas of the brain to operate together through an intricate network of neurons. As a classroom teacher who has also worked as a neurologist, Judy Willis offers a unique perspective on how to help students not only learn the mechanics of reading and comprehension, but also develop a love of reading.

A number of things need to happen for a child to learn to read and to comprehend what she reads, says Nadine Gaab, PhD. Gaab, an HMS associate professor of pediatrics, heads a research unit in the Laboratories for Cognitive Neuroscience at Boston Children's Hospital. Infants must learn to process sounds. By early kindergarten or preschool, the child must learn phonological processing, which is the ability to manipulate the sounds of language, such as adding or deleting sounds to make words.

CBD and dyslexia, the pair that no one saw coming. One symptom of dyslexia is high anxiety when it comes to reading and writing. Most people do not like to read out loud because they are afraid of mispronouncing a word, but people with dyslexia are extremely anxious to read aloud because they subconsciously mix up the letters and words. CBD formally called cannabidiol, is known to help relieve anxiety.
