hypothermia. An interdisciplinary team identified gaps in practice in our institution regarding temperature assessment and documentation of rewarming and initiated an evidence-based practice project to change practice at our institution. The goals were to decrease time to temperature assessment, increase core temperature assessment, and increase implementation of appropriate rewarming methods ...

A complete cold paralysis of respiration and thermoregulation occurs in rats at the temperature in the brain 16.6 +/- 0.3 and in the rectum 15.2 +/- 0.3 degrees C. Under the conditions of room temperature 18-19 degrees C, the respiration never restores, and the animals die. This is believed [6] to b ...

IN homeothermic species, a thermoregulatory system coordinates defenses against cold and heat to maintain internal body temperature within a narrow range, thus optimizing normal physiologic and metabolic function.

Chemical thermoregulation is carried out at the expense of local and general metabolism, which contributes to the increase of heat formation. Physical - provides heat transfer processes through thermal conduct (convection) and heat radiation (radiation), as well as by evaporation of water from the surface of the skin and mucous membranes.

Vasopressin (antidiuretic hormone or ADH) regulates water retention in kidneys and assists with thermoregulation in hypohydrated subjects. Atrial natriuretic peptide (ANP) secreted by the heart participates in water balance regulation but only minimally during cold exposure at 10°-12°C.

Background: Intraoperative hypothermia and postoperative pain control are two important clinical challenges in anesthesiology. Transient receptor potential vanilloid 1 has been implicated both in thermoregulation and pain. Transient receptor potential vanilloid 1 antagonists were not advanced as analgesics in humans in part due to a side effect of hyperthermia.
